

OMC Data-On-Line

AND OMC WEBSERVER

FEATURES

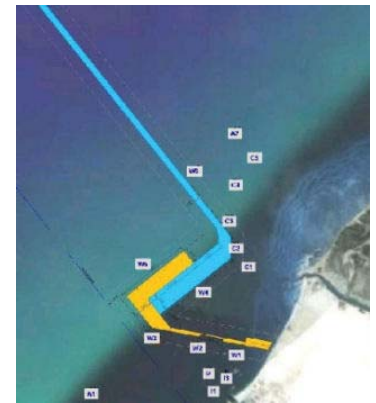

- Organize your stations and data in a hierarchical-structured tree
- View data real time using Google Earth™
- View recent, as well as summary values
- Generate custom reports – reports can be saved, printed, or emailed
- Configure alarms
- Display data in a variety of graphs
- Analyze data using graphical functions

Expand the power of your datalogger with OMC Data-On-Line and OMC WebServer, allowing you to view your data from anywhere with an Internet connection!

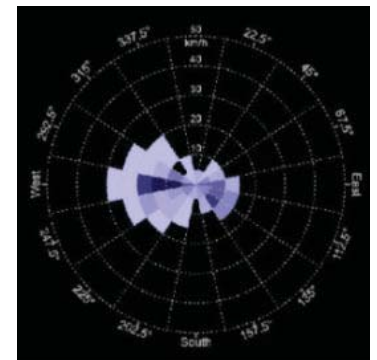

OMC Data-On-Line is a flexible software program not only used for visualization, storage and retrieval of meteorological and hydrological parameters, but also to generate reports for publication on the internet.

With OMC Data-On-Line it is possible to organize your stations and data in an hierarchical-structured tree. Field data in most cases is gathered by dataloggers. On preset times the datalogger will send data to the OMC Data-On-Line platform. Data can be sent in many ways, such as RS-232, TCP/IP, FTP, email, through PSTN or GSM. A Data Collector that is always active in the background notices these incoming messages and puts the data into the SQL-Database. After the data is stored in the database, the data can be accessed using OMC Data-On-Line.

When OMC-WebServer is added to OMC Data-On-Line it is possible to view your data whenever you can hook up to the internet using a web browser on a PC or even a PDA. Sharing data with others becomes very easy.
